

Claims:

1. A combination laminating tool, comprising:

an elongated handle having a first end and an opposite second end;

a freely-rotatable roller supported at said first end of said handle; and

braking means coupled to said handle for selectively braking rotation of said freely-rotatable roller.

2. A tool according to claim 1, further comprising:

a wedge shaped edge presser supported by and extending from said opposite second end of said handle.

3. A tool according to claim 1, further comprising:

a detachable veneer presser; and

means for releasably attaching said veneer presser to said opposite second end of said handle.

4. A tool according to claim 3, wherein:

said means for releasably attaching include male and female interlocking means which do not require pressing a button for release.

5. A tool according to claim 3, wherein:

    said veneer presser is approximately as wide as said roller and has a rounded working surface.

6. A tool according to claim 1, further comprising:

    a plurality of detachable pressure tips, each having a different shape, and each being releasably attachable to said opposite second end of said handle.

7. A combination laminating tool, comprising:

    an elongated handle having a first end and an opposite second end;

    a freely-rotatable roller supported at said first end of said handle; and

    a plurality of detachable pressure tips, each having a different shape, and each being releasably attachable to said opposite second end of said handle.

8. A tool according to claim 7, further comprising:

    a wedge shaped edge presser supported by and extending from said opposite second end of said handle.

9. A tool according to claim 7, further comprising:

    a detachable veneer presser; and

    means for releasably attaching said veneer presser to said opposite second end of said handle.

10. A tool according to claim 9, wherein:

    said means for releasably attaching include male and female interlocking means which do not require pressing a button for release.

11. A tool according to claim 9, wherein:

    said veneer presser is approximately as wide as said roller and has a rounded working surface.

12. A combination laminating tool, comprising:

    an elongated handle having a first end and an opposite second end;

    a freely-rotatable roller supported at said first end of said handle;

    a detachable veneer presser; and

    means for releasably attaching said veneer presser to said opposite second end of said handle, wherein:

    said means for releasably attaching include male and female interlocking means which do not require pressing a button for release.

13. A tool according to claim 12, further comprising:  
a wedge shaped edge presser supported by and extending from  
said opposite second end of said handle.

14. A tool according to claim 12, wherein:  
said veneer presser is approximately as wide as said roller  
and has a rounded working surface.

15. A combination laminating tool, comprising:  
an elongated handle having a first end and an opposite  
second end;  
a freely-rotatable roller supported at said first end of  
said handle;  
a detachable veneer presser; and  
means for releasably attaching said veneer presser to said  
opposite second end of said handle, wherein:  
said veneer presser is approximately as wide as said roller  
and has a rounded working surface.

16. A tool according to claim 15, further comprising:  
a wedge shaped edge presser supported by and extending from  
said opposite second end of said handle.

17. A tool according to claim 15, wherein:

    said veneer presser is approximately as wide as said roller  
and has a rounded working surface.
